

The ARM-5000 is an Escrow unit with the ability to temporarily hold coins. It is suitable for use in a large variety of applications including gaming machines, amusement equipment and vending applications.

The compact design is made possible by the use of a small DC Solenoid.

The position of the crank cam can be rotated by the Solenoid to enable a choice of any one of four locations for both flaps.

TECHNICAL SPECIFICATIONS

- **Maximum Coin Capacity:**
5 pieces of UK 10p
- **Distribution Method:**
DC Solenoid drive
- **Supply Voltage Options:**
12VDC
- **Current Consumption:**
384 mA (maximum)
- **Weight:**
250g (approx)
